

URI options for asynchronous request are shown below.  
For requests whose operation type is asynchronous, the parameters shown in this section are set as URI options.

Optional parameters	type	required	overview	remarks
notification_address	string	×	Operation completion notification address	IPv4 address format. When omitted, do not notify operation completion.
notification_port	string	×	Operation completion notification destination port	When omitted, do not notify operation completion.

[Option parameter specification for URI]

URI	/xxxx?notification_address=192.168.100.10&notification_port=65000
-----	---

Body uses JSON format.
