

Interface name	Getting equipment information
Method	GET

URI parameter	type	overview	remarks
equipment_type_id	string	equipment type ID	-

URI	/v1/equipment-types/{equipment_type_id}
-----	---

message	code	body	type	required	Allow null	Allow empty array	overview	remarks
request	-	-	-	-	-	-	-	-
response	200	equipment_type	object	○	x	-	Model information	-
		equipment_type_id	string	○	x	-	equipment type ID	-
		platform	string	○	x	-	platform	-
		os	string	○	x	-	OS	-
		firmware	string	○	x	-	Firmware version	-
		router_type	string	○	x	-	router type	"normal", "core-router"
		physical_if_name_syntax	string	x	○	-	Physical-IF name syntax	When router_type is "core-router", required.
		breakout_if_name_syntax	string	x	○	-	Breakout-IF name syntax	ex) <PORTPREFIX>-<IFSOLTNNAME>-<BREAKOUTIFSUFFIX> Only models that can use breakout-IF
		breakout_if_name_suffix_list	string	x	○	-	breakout_if_name_suffix_list	Separated list format (ex) 0:1, 2:3 Only models that can use breakout-IF
		capability	object	○	x	-	Capability information	-
		vpn	object	○	x	-	VPN capability information	-
		l2	boolean	○	x	-	L2VPN compatibility	-
		l3	boolean	○	x	-	Possibility to comply with L3VPN	-
		qos	object	○	x	-	QoS capability information	Store below. (Not support)
		remarks	boolean	○	x	-		"true"
		remarks_capability	string[]	x	○	○		"null"
		remarks_default	string	x	○	-		"null"
		shaping	boolean	○	x	-		"false"
		egress_queue_capability	string[]	x	○	○		"null"
		egress_queue_default	string	x	○	-		"null"
		dhcp	object	○	x	-	DHCP information	-
		dhcp_template	string	○	x	-	File path of "dhcpd.conf"	-
		config_template	string	○	x	-	File path of initial config template	-
		initial_config	string	○	x	-	File path of initial config	-
		snmp	object	○	x	-	SNMP information	-
		if_name_oid	string	○	x	-	MIB information of IF name	Set OID
		snmptrap_if_name_oid	string	x	○	-	MIB information of IF name in the SNMP trap	Set OID
		max_repetitions	int	○	x	-	Maximum number to get with GET Bulk	-
		boot_complete_msg	string	○	x	-	Syslog message for confirming the startup	-
		boot_error_msgs	string[]	x	○	x	Syslog message for confirming the failure	"null"
		if_definitions	object	○	x	-	IF information definition	-
		ports	object[]	○	x	○	Port information	-
		speed	string	○	x	-	Port speed	-
		port_prefix	string	○	x	-	Port name prefix	-
		lag_prefix	string	○	x	-	Lag IF name prefix	-
		unit_connector	string	○	x	-	Unit IF connector	-
		slots	object[]	○	x	○	Slot information	-
		if_id	string	○	x	-	Physical port ID	-
		if_slot	string	○	x	-	IF slot name	-
		speed_capabilities	string[]	○	x	○	Port speed type correspondence list	-

Refer to the "Error response format" sheet for error response

Body uses JSON format.
