

Interface name	operation result
Method	PUT

URI parameter	type	overview	remarks
operation_id	string	operation id	-

URI	/v1/operations/{operation_id}
-----	-------------------------------

message	code	body	type	required	Allow null	Allow empty	overview	remarks
request	-	operation_id	string	<input type="radio"/>	x		Operation ID	-
		occurred_time	string	<input type="radio"/>	x		Occurrence time	The format is "YYYYMMDD hhmmss"
		last_update_time	string	<input type="radio"/>	x		Last update time	When the status is in the completion state, the completion time is stored. The format is "YYYYMMDD hhmmss"
		status	string	<input type="radio"/>	x		State	"unexecuted" "executing" "completed" "failed" "canceled"
		sub_status	string	-	x		Substate	As required, each function stores the detailed state of "running".
		request	object	<input type="radio"/>	x		Request information	-
		uri	string	<input type="radio"/>	x		Request URI	-
		method	string	<input type="radio"/>	x		Request method	"POST" "PUT" "DELETE" ※ Only operations that can be asynchronous can be specified
		body	string	<input type="radio"/>	x		Body part upon request	Character string information of the body information at the time of request * For double quotation marked from the original, it is supposed to be replaced by "¥" and stored.
		response	object	-	x		Response information	Required when status is "completed" or "failed"
		status_code	int	<input type="radio"/>	x		Process result information	"Set the value with the same policy as REST response code Example: 200 = OK"
		body	string	<input type="radio"/>	x		Body part of response	Character string information of the body part of the response created for each process Basically, it assumes the json format, but for double quotation, it is assumed to be replaced by "¥" and stored. * In the IF case where information is not placed on the body part, it becomes an empty string. The created object_id to be included in the response of the POST request, The message corresponding to the process failure is also stored here.
		target_clusters	object[]	x	<input type="radio"/>	<input type="radio"/>		
		cluster_id	string	<input type="radio"/>	x			
		request	object	<input type="radio"/>	x			
		uri	string	<input type="radio"/>	x			
		method	string	<input type="radio"/>	x			
		body	string	<input type="radio"/>	x			
		response	object	x	<input type="radio"/>			
		status_code	int	x	<input type="radio"/>			
		body	string	x	<input type="radio"/>			
		rollbacks	object	x	<input type="radio"/>			
		result	string	<input type="radio"/>	x			
		occurred_time	string	<input type="radio"/>	x			
		target_clusters	object[]	x	<input type="radio"/>	<input type="radio"/>		
		cluster_id	string	<input type="radio"/>	x			
		request	object	<input type="radio"/>	x			
		uri	string	<input type="radio"/>	x			
		method	string	<input type="radio"/>	x			
		body	string	x	<input type="radio"/>			
		response	object	x	<input type="radio"/>			
		status_code	int	x	<input type="radio"/>			
		body	string	x	<input type="radio"/>			
response	200	-	-	-	-	-	-	-
Refer to the "Error response format" sheet for error response								

Body uses JSON format.
