

Interface name	operation result
Method	PUT

URI parameter	type	overview	remarks
operation_id	string	operation id	-

URI	/v1/operations/{operation_id}
-----	-------------------------------

message	code	body	type	required	Allow null	Allow empty	overview	remarks
request	-	operation_id	string	○	×		Operation ID	-
		occurred_time	string	○	×		Occurrence time	The format is "YYYYMMDD_hhmmss"
		last_update_time	string	○	×		Last update time	When the status is in the completion state, the completion time is stored. The format is "YYYYMMDD hhmmss"
		status	string	○	×		State	"unexecuted" "executing" "completed" "failed" "canceled"
		sub_status	string	-	×		Substate	As required, each function stores the detailed state of "running".
		request	object	○	×		Request information	-
		uri	string	○	×		Request URI	-
		method	string	○	×		Request method	"POST" "PUT" "DELETE" ※ Only operations that can be asynchronous can be specified
		body	string	○	×		Body part upon request	Character string information of the body information at the time of request * For double quotation marked from the original, it is supposed to be replaced by "¥" and stored.
		response	object	-	×		Response information	Required when status is "completed" or "failed"
		status_code	int	○	×		Process result information	"Set the value with the same policy as REST response code Example: 200 = OK "
		body	string	○	×		Body part of response	Character string information of the body part of the response created for each process Basically, it assumes the json format, but for double quotation, it is assumed to be replaced by "¥" and stored. * In the IF case where information is not placed on the body part, it becomes an empty string. The created object_id to be included in the response of the POST request, The message corresponding to the process failure is also stored here.
		target_clusters	object[]	×	○	○	Cluster unit request/response in multi cluster	Optional for FC
		cluster_id	string	○	×		Cluster ID of the request destination	-
		request	object	○	×		Request information	-
		uri	string	○	×		Request URI	-
		method	string	○	×		Request method	"POST" "PUT" "DELETE" "PATCH" ※ Only operations that can be asynchronous can be specified
		body	string	○	×		Request body part	Character string information of response body part created for each processing. ※ Basically it assumes the json format, but for double quotes, it is assumed to be replaced by [¥] and stored. ※ In the IF case where information is not placed on
		response	object	×	○		Response information	-
		status_code	int	×	○		Response code	-
		body	string	×	○		Response body data at rollback	String information of response Body data created every rollback to the cluster
		rollbacks	object	×	○		Rollback information	Optional for FC
		result	string	○	×		Rollback process result	success: "completed", failure: "failed" none: "none"
		occurred_time	string	○	×		Rollback start time	-
		target_clusters	object[]	×	○	○	Request/Response information of rollback for clusters	None in case there is no target for rollback
		cluster_id	string	○	×		Cluster ID	-
		request	object	○	×		Request information	-
		uri	string	○	×		Request URI	-
		method	string	○	×		Request method	"POST" "PUT" "DELETE" "PATCH" ※ Only operations that can be asynchronous can be specified
		body	string	×	○		Request body part	Character string information of response body part created for each processing. ※ Basically it assumes the json format, but for double quotes, it is assumed to be replaced by [¥] and stored. ※ In the IF case where information is not placed on
		response	object	×	○		Response information	-
		status_code	int	×	○		Response code	-
		body	string	×	○		Response body data at rollback	String information of response Body data created every rollback to the cluster
response	200	-	-	-	-	-	-	-
Refer to the "Error response format" sheet for error response								

Body uses JSON format.
